Mastering APA Citations for the Davis Drug: A Comprehensive Guide

When researching medical treatments, pharmaceuticals, or clinical studies, the accuracy of your citations is as crucial as the data you present. In academic writing, the American Psychological Association (APA) style remains one of the most widely used formats for citing sources in health sciences, psychology, and related disciplines. This guide focuses specifically on how to cite references related to the **Davis drug**—a compound frequently discussed in pharmacological literature—using APA 7th edition guidelines. Whether you are a graduate student, a researcher, or a clinician preparing a manuscript, this article will equip you with the knowledge to create clean, professional citations that enhance the credibility of your work.

Why APA Matters in Pharmaceutical Research

APA style offers a standardized framework that clarifies authorship, publication dates, and source details—information that is essential when evaluating the reliability of a drug study. In the context of the Davis drug, proper citation ensures that readers can locate original research, verify dosage information, and assess the validity of clinical outcomes. Moreover, many journals in the pharmaceutical field mandate APA or a similar citation format; failing to comply can result in manuscript rejection.

Key Elements of an APA Citation

Before diving into specific examples, it helps to understand the core components of an APA reference entry:

1. Author(s)
2. Publication year
3. Title of the work
4. Source information (journal, book, website)
5. Additional details (volume, issue, pages, DOI)

Each element follows strict formatting rules—capitalization, punctuation, italics, and the use of a period or comma. These rules apply regardless of the type of source, whether it is a peer reviewed article, a clinical trial registry, or a patent filing.

Common Source Types for the Davis Drug

Research on the Davis drug spans various media. Below is a list of source types you may encounter and need to cite:

- Journal articles reporting clinical trials or pharmacodynamics.
- Books or book chapters covering drug mechanisms.
- Patents detailing chemical synthesis and proprietary formulations.
- Clinical trial registries (e.g., ClinicalTrials.gov).
- Government reports or regulatory documents.
- Professional society guidelines.
- Online databases and drug information portals.

- Conference abstracts and posters.

Below, each source type is addressed with step by step instructions and example citations.

Citing Journal Articles that Discuss the Davis Drug

Peer reviewed journal articles are the backbone of scientific literature. They provide primary data on efficacy, safety, pharmacokinetics, and patient outcomes. The APA format for a journal article is:

Author(s). (Year). Title of the article. Journal Name, Volume(Issue), Page range. https://doi.org/xxxx

When the article focuses on the Davis drug, the title often includes the drug's name or its abbreviation. Here's a step by step example:

1. Identify the last name and initials of all authors. Separate multiple authors with commas, and use an ampersand (&) before the final author.
2. Insert the publication year in parentheses.
3. Write the article title in sentence case (only the first word and proper nouns capitalized).
4. Italicize the journal name and capitalize each major word.
5. Include the volume number in italics, followed by the issue number in parentheses (not italicized).
6. Add the page range.
7. Attach the DOI; if unavailable, use the stable URL.

Example citation:

Smith, J. A., & Lee, K. R. (2022). Pharmacokinetic profile of the Davis drug in elderly patients. Journal of Clinical Pharmacology, 58(4), 1123–1134. https://doi.org/10.1234/jcp.2022.00123

Note the use of sentence case for the article title and the italics for the journal name and volume.

Special Considerations for Multi Author Articles

APA 7th edition recommends listing up to 20 authors. If a study has more than 20 authors, include the first 19, insert an ellipsis, and then add the final author's name.

Example with many authors:

Brown, L. T., Patel, M. S., Nguyen, H., ... Garcia, R. (2021). Long term safety of the Davis drug in a global cohort. International Journal of Drug Safety, 45(2), 200–210. https://doi.org/10.5678/ijds.2021.04502

Citing Books and Book Chapters on the Davis Drug

Books offer comprehensive overviews or in depth analyses of drug mechanisms. The APA format for a book is:

Author(s). (Year). Title of the book. Publisher.

For a book chapter:

Author(s). (Year). Title of chapter. In Editor(s) (Ed(s).), Title of the book (pp. page range). Publisher.

Example book citation:

Jones, A. L. (2019). Pharmacology of Novel Therapeutics. Academic Press.

Example chapter citation:

Lee, K. R., & Patel, M. S. (2018). The Davis drug: Mechanisms of action. In R. Garcia & L. T. Brown (Eds.), Contemporary Drug Development (pp. 75–98). Springer.

Patents Involving the Davis Drug

Patents are essential when discussing proprietary formulations or synthesis routes. APA treats patents similarly to books but includes the patent number and country. Format:

Inventor(s). (Year). Title of the invention (Patent No. XXXXXXX). Country.

Example:

Smith, J. A. (2020). Method for producing the Davis drug (Patent No. US1234567B2). United States.

Clinical Trial Registries

ClinicalTrials.gov and similar registries provide essential data on study design, eligibility, and results. The APA format for a registry entry is:

Author(s). (Year). Title of the study. ClinicalTrials.gov. https://clinicaltrials.gov/ct2/show/NCTxxxxxxx

Example:

Lee, K. R., & Brown, L. T. (2017). Phase III trial of the Davis drug in metastatic colorectal cancer. ClinicalTrials.gov. https://clinicaltrials.gov/ct2/show/NCT01234567

Government Reports and Regulatory Documents

When citing documents from agencies such as the FDA, WHO, or EMA, use the following format:

Agency. (Year). Title of the report (Report No. XXXXX). Publisher. URL

Example:

U.S. Food & Drug Administration. (2021). Safety evaluation of the Davis drug (FDA-2021-0012). U.S. Government Printing Office. https://www.fda.gov/media/123456

Professional Society Guidelines

Guidelines issued by societies such as the American College of Cardiology are cited like journal articles but may lack a DOI. Use the following format:

Author(s). (Year). Title of the guideline. Journal or Society Publication, Volume(Issue), Page range. URL

Example:

American College of Cardiology. (2020). Guidelines for the use of the Davis drug in hypertension.</

em> Journal of the American College of Cardiology, 75(12), 1234–1245. https://www.acc.org/guidelines

Online Databases and Drug Information Portals

Reliable drug information portals such as Drugs.com or Medscape provide up to date dosage, side effect, and interaction data. When citing a webpage, include the author (often the organization), publication year (or “n.d.” if none), title, and URL. Format:

Author. (Year). Title of the page. Site Name. URL

Example:

Drugs.com. (2023). Davis drug. Drugs.com. https://www.drugs.com/davis-drug.html

Conference Abstracts and Posters

Conference materials are often unpublished and may lack DOIs. Cite them as:

Author(s). (Year, Month). Title of the abstract or poster. Title of the conference, Location. URL (if available)

Example:

Lee, K. R. (2022, June). Novel delivery mechanisms for the Davis drug. Proceedings of the International Conference on Pharmaceutical Sciences, Berlin, Germany. https://www.icps2022.org/abstracts/lee2022

In Text Citations for the Davis Drug

APA in text citations follow the author date format. For a single author, use (Smith, 2022). For two authors, use (Smith & Lee, 2022). For three or more authors, use (Smith et al., 2022). When quoting directly, add a page number: (Smith, 2022, p. 1125).

Example:

Smith and Lee (2022) demonstrated that the Davis drug significantly reduced blood pressure in hypertensive patients.

Tips for Maintaining Consistency and Accuracy

- Always double check the spelling of author names; errors can mislead readers.
- Use the APA Publication Manual or the APA Style website for the latest updates.
- When in doubt about the format, consult the Publication Manual of the American Psychological Association (7th ed.).
- Keep a spreadsheet of all sources with full details; this prevents missing information during citation.
- Use reference management software (e.g., EndNote, Zotero, Mendeley) configured for APA 7th edition.

Common Pitfalls and How to Avoid Them

Below are frequent mistakes when citing the Davis drug and how to correct them:
