4. Building Your Aquarium with Amano Products

Let's walk through a step by step guide on how to assemble a balanced aquarium using Amano's range. This section covers tank selection, setup, and initial maintenance.

4.1. Choosing the Right Tank

1. Determine the fish species you want to keep.
2. Calculate the appropriate tank volume (e.g., 20 gallons for a small community tank).
3. Consider tank shape: rectangular for easy maintenance, round for aesthetic appeal.

4.2. Setting Up the Substrate

For a planted tank, use Amano's nutrient rich planting mix. Layer it evenly, ensuring a depth of at least 2 inches for root development.

4.3. Installing the Filtration System

1. Place the mechanical filter at the tank's lower corner.
2. Attach the biological media (ceramic or bio brick) to the filter housing.
3. Position the powerhead to create gentle water flow across the substrate.

4.4. Installing Lighting

Mount the LED fixture on the tank lid. Adjust the intensity to match the plant species: lower for delicate plants, higher for hardy ones.

4.5. Aquascaping Your Tank

Use decorative rocks and driftwood to create focal points. Arrange plants in a natural gradient, placing taller species in the back and shorter ones in the front.

4.6. Adding Water and Conditioning

1. Fill the tank with dechlorinated water.
2. Use an Amano water conditioner to neutralize chlorine and chloramine.
3. Test the water for pH, hardness, and other parameters.

4.7. Cycling the Tank

Before adding fish, allow the nitrogen cycle to establish. Use an ammonia source and monitor ammonia, nitrite, and nitrate levels over 2–4 weeks.

4.8. Introducing Fish

Once the cycle is complete and water parameters stabilize, gradually acclimate fish using a drip acclimation method.

5. Ongoing Maintenance: Keeping Your Aquarium Healthy

Regular care is essential for a vibrant aquarium. Amano's products simplify many routine tasks.

5.1. Weekly Water Changes

Remove 10–20% of the water weekly. Replace it with conditioned water to maintain stable parameters.

5.2. Filter Cleaning

Clean mechanical filter media every 2–3 weeks. Replace biological media every 3–6 months to maintain bacterial populations.

5.3. Plant Care

Trim dead or yellowing leaves. Replenish nutrients with Amano's plant fertilizer if necessary.

5.4. Algae Management

Use Amano's algae control solutions sparingly to prevent overgrowth. Maintain good lighting schedules and water

flow to deter algae.

5.5. Monitoring Water Parameters

Test pH, ammonia, nitrite, nitrate, and hardness at least once a month. Adjust as needed using Amano's test kits and conditioners.
